

Swiss Cyber Storm

Speaker Information

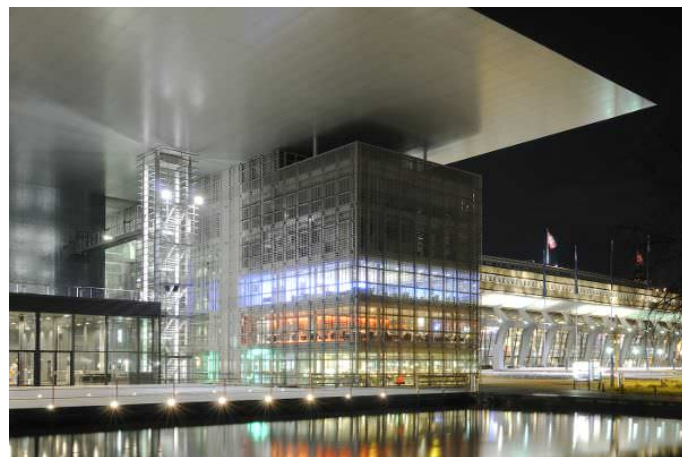

The prime national conference setting the Swiss IT Security agenda

Time / Location / Venue: October 18, 2017; Lucerne, Switzerland

Backing: SCS is supported by @GovCERT_CH (MELANI) and multiple Universities.

Audience: The audience is very broad and brings CISOs, techies and young talents into the same room. We expect 200 - 300 paying participants. 80% will be Swiss.

Venue: The KKL in Lucerne, Switzerland, is a top modern concert and conference venue with direct access to lake Lucerne, one of the most beautiful regions, right in the heart of Switzerland. Lucerne is the perfect place to prolong your stay with a long weekend and enjoy hiking in the Alps or a boat trip on the amazing lake amidst the mountains. The KKL is next to Lucerne train station, about 90min from Zurich airport by train.

KKL by night, as seen from the lake

Your Talk: Our slots are usually 35 minutes plus discussion time. You are free to use any template you wish for your slides, but we would like to coach the development of your presentation before the conference. You know your topic by heart, we know our audience and our program. Together we can make the best out of your talk and let it shine. Slides will be put on our website (opt-out possible) and advertised via social media. We also consider providing videos of all talks, but that's not yet decided.

We are looking for the next thing, for speakers to present technical or business security issues, defense techniques, background information and new offensive developments everybody should know about.

Format: We run about 16 presentations in two tracks. We join the tech and the management track into a plenary session for the morning keynote and for 1-2 talks at the end of the day. Most of the talks are curated / happen by invitation. But we do not rule out a limited CallForPapers.

Cyber Challenges / CTF: The Swiss national team for the European Cyber Challenges hosted by ENISA is picked and presented by Swiss Cyber Storm (in fact ENISA adopted the national cyber challenge idea after it was invented by Swiss Cyberstorm and the Austrian team).

Networking: Switzerland is a small country. This allows to address management and techies at the same conference. But it also allows for a special atmosphere where people from various levels meet and talk security. There will be several high class speakers and plenty of time to talk to everybody during the speaker's reception the night before the conference and a long aperitif / networking event right after the conference.

Troy Hunt speaking at SCS 2016

Sponsors: We have a variety of national and international sponsors. Our gold sponsor Terreactive has been our partner for years.

Language: All talks and all slides will be in English.

Expenses: Swiss Cyberstorm can cover all your travel costs door to door. We provide the accommodation in a 4 star hotel within walking distance from the venue.
